

P2

有

(a)

1.

**aig** – Converts local functions of the nodes to AIGs.

**strash** – Transforms the current network into an AIG by one-level structural hashing, but **aig** is not.

strash.

2.

**bdd** – Converts local functions of the nodes to BDDs.

**collapse** – Collapsing is performed by building global functions using BDDs and is, therefore, limited to relatively small circuits. But **bdd** only convert nodes to BDDs.

(b)
